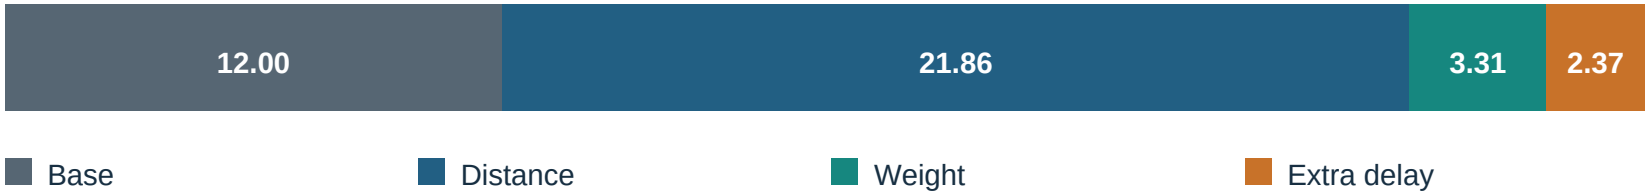
Hypothetical transportation cost and sensitivity

SIMULATED ONLY | 2,000 shipments | seed 20261022 | coefficients are planning assumptions

Mean cost: BRL 39.53 per shipment



Cost only scenario	Mean BRL	Reduction
10% lower distance	37.34	5.53%
Up to one fewer delay day	38.13	3.54%

These are arithmetic what if results. Implementation cost, feasibility and real service effects are not modeled.
